

NHS.pycom:

LLM use cases in the NHS

Survey results and discussion

A very useful link

<https://github.com/nhs-pycom/generative-ai-hackathon>

Background

The NHS Long Term Plan
commits to:

**“digitally
enabled care”**

and

**“enabling productive
working”**

In both, AI will play
key role

<https://www.longtermplan.nhs.uk/>

?

Announcing...

NHS Python Community

A Hackathon focused on
Large Language Models

We want to hear your ideas!

following the QR code

<-----

Principles

Ideas for a hackathon should be:

- **community-driven**
- **add value** to the NHS / our service users
- **ethical and responsible**
- **be published publicly @ [nhs.pycom/generative-ai-hackathon](https://nhs.uk/pycom/generative-ai-hackathon)**

Technical Considerations

Consider:

Inputs

Images

Text

Semi-structured

Tabular

Code

Audio

Tools

Knowledge graphs

Outputs

Text

Images

Slides

Code

Approaches and Interactions

Chatbots

Retrieval Augmented Generation (RAG)

Agents

Multi-modal Knowledge fusion

Text generation

Training dataset generation

Techniques

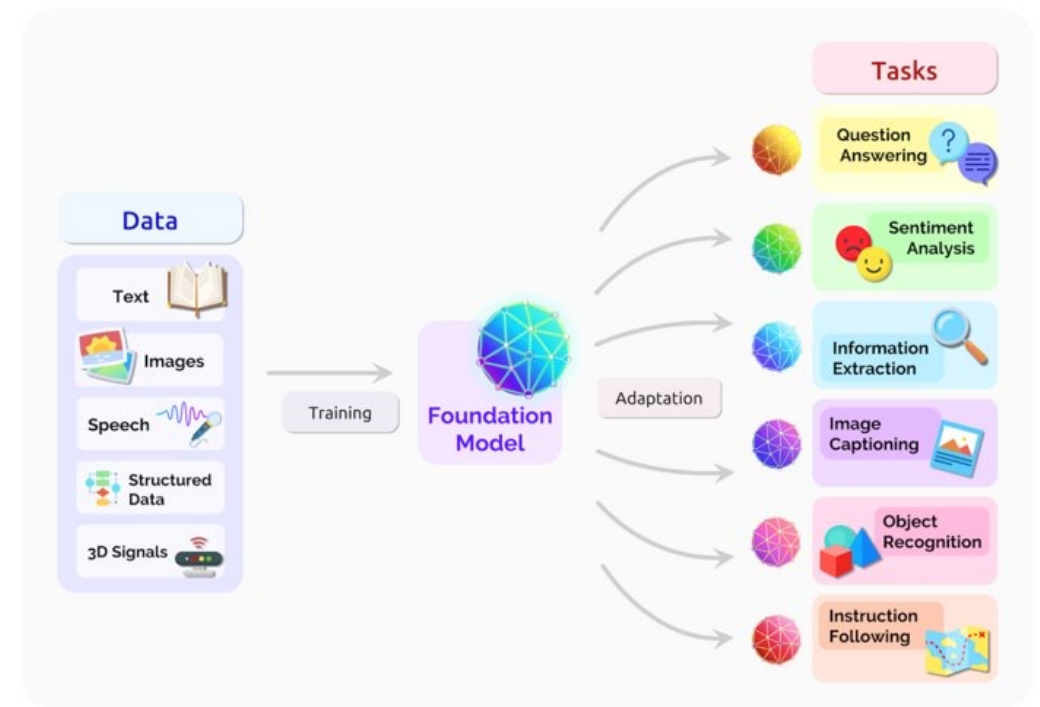

Summarisation

Question Answering (QA)

QA over specific knowledge

Entity extraction + Masking

Translation

Risks and Challenges

Privacy concerns

Trust

Safety

Factual Grounding vs. Hallucinations

Lack of suitable data

Ethical risks of using certain data

Bringing human-into-the-loop

Unknown training data content

Community Generated Ideas

Core themes

Consider:

How might we (*plus...*)

- Expanding current use-cases
- Anything else you want to propose
- Other Themes?

Theme: Productivity

Clinical

13

"Evidence synthesis for rare diseases, with applications for phenotyping and treatment planning."

Non-clinical

11

"An aid to often lengthy performance reporting through a command line tool."

Theme: Information consolidation

Clinical

18

"LLMs could parse clinical notes for signals of: (a) whether a patient is likely to be discharged today and (b) what they are waiting for (contacting family members, packages of care, ordering take-home medication, booking transport, clinical review, lab results, discharge summaries) that is holding them back from vacating a bed."

Non-clinical

5

"A bespoke chatbot for NHS analysts and stakeholders new to Data Science and want to know more specific to their needs"

Theme: Guidance querying

Both **Clinical** & 2 **Non-clinical**

"Development of a chatbot to help technical leads and developers interrogate clinical techniques and best practices to aid in decision making during the development process."

Non-clinical

19

"Consolidate information on regulation, guidance and standards for NHS staff looking to develop or commission AI products - With the time pressures that clinicians and other healthcare workers have, reducing any time barrier in finding information would be a welcomed endeavour."

Theme: Automation

Non-clinical

3

- "1. Methods to prevent the sharing of secure data.
- 2. Methods to recognise hallucination."

Non-clinical

1

"A big part of my work is preparing a large monthly slide deck. I've been working on automating it as much as possible because at first creating the next month's pack took up the majority of my month. I would be interested if there was a way I could semi-automate this with generated narrative that I just need to review/touch-up"

Theme: Translation

Clinical

16

"Translating clinic letters for people who English is not their first language."

Clinical

14

"Healthcare Information Summariser for Patients, with capabilities to alter the reading age and language summarisation. If there was scope, it would be cool to see if the proposed approaches could be applied in real-time as a doctor is speaking, acting as a translation service (although this data may be publicly available)."

Theme: Democratising access

Non-clinical

12

"An open source tool for analysing written consultation* responses in organisations who do not have large data science teams"

Non-clinical

4

"Identify the public domain health sector data that could be used to most efficiently pre-train an LLM for a trustworthy health AI application"

*Consultation here refers to policy consultations

Theme: Integrating with systems

Non-clinical

10

"We've talked about whether we can sit and LLM on our data warehouse and rather than have dashboards to be able to ask questions of the tables directly."

Clinical

15

"Interfacing a LLMs to multiple EPMAs/EPR solutions via FHIR or HL7 – Thus providing a summary of a patient based on a prompt and pulling relevant data/documentation/clinical result of the patient."

Consider:
